

THE VALLEY FEVER **WOOF** STUDY

(WEB-BASED OBSERVATIONS, OUTCOMES, AND FINDINGS)

This study is a collaboration of

COLLEGE OF MEDICINE TUCSON

Valley Fever Center
for Excellence

&

UCDAVIS

VETERINARY MEDICINE

to study outcomes of Valley Fever treatment in dogs.

We are sorry for your dog's recent diagnosis with Valley Fever. We know recovery can be a long journey and we hope you will share yours with us. The goal is to better understand the effect of treatment factors on the time it takes for the disease to resolve. What we learn will help veterinarians improve treatment for all dogs.

In this web-based study, you will complete an initial enrollment survey plus progress surveys at 1, 2, 3, 6, 9, and 12 months. We will collect:

- Your assessment of your dog's progress
- Medications and treatments
- Medical records from your vet you append

We appreciate your time and participation in this important study.

FOR ENROLLMENT

•Dog was diagnosed with Valley Fever by your veterinarian within the past 30 days

AND

•Dog is taking an oral antifungal medication (ex. fluconazole, itraconazole)
